

Iv'e got a problem printing with a StyleWriterII. I am printing from a llvx with 20 megs ram. I am trying to print a Quark file that has 2 fonts a couple of boxes and 3 gradient fills.

Two things happen: I get a " Disk is full" error, that I can't find documented, I also have parts of letters that are over one of the gradient fills get cut off. This only happens to the text over the fill. Text adjeacent in a different box is uneffected.

Any ideas?
